BTL EXO

Naturally Perfect Gait, Wherever Needed

Book demo

Robotic Exoskeleton for Walking Rehabilitation

BTL EXO is an innovative free-walking medical exoskeleton device that **dynamically supports and enhances lower limb motor function**.

This cutting-edge robotic exoskeleton for legs **helps your patients** with neurological or mobility impairments **relearn proper gait patterns** by providing active movement support.

Autonomous Natural Walking

Designed For Any Environment

< 5 min

Unmatched Setup Speed

Autonomous Natural Walking

To replicate a natural walking experience, our powered exoskeleton uses a **unique weight shifting mechanism to trigger each step**, allowing for smooth and intuitive movement. Together with a custom-fit trunk support for better upper body stability, it enhances walking confidence by enabling more controlled and secure movement.

By engaging all major lower limb joints – hip, knee, ankle, and metatarsal – BTL EXO ensures coordinated movement throughout the gait cycle, enabling more natural and effective gait re-education compared to other solutions.

Designed For Any Environment

Designed for real-world use, BTL EXO allows walking on flat surface, uneven terrain, and various inclines – all while maintaining control, ensuring stability and minimizing fall risk.

Unlike conventional systems limited to clinical settings, our versatile exoskeleton robotic suit enables functional mobility training in **conditions that closely reflect everyday** challenges.

Unmatched Setup Speed

BTL EXO ensures an **optimal fit in just a few minutes.**

Thanks to a hip-release mechanism that enables easy entry and exit, as well as quick-release pins for fast lower limb size adjustments, you **spend less time preparing your patients** and have **more focus on the actual therapy** – a clear advantage over more complex or time-consuming alternatives.

Medical Exoskeleton that Helps Your Patients Step by Step

Stroke Patients

BTL EXO supports relearning of a symmetrical and natural gait by guiding coordinated lower limb movement.

Spinal Cord Injury

BTL's powered exoskeleton enables patients with partial or limited motor function to stand up and walk again in a safe, assisted manner.

Listen to Your Peers

Sergio Lerma Lara
Spain

"I have used the BTL EXO with patients suffering from spinal cord injury and stroke, and I observed noticeable improvements already after the very first therapy session."

Franco Molteni
Italy

"Combination of end-effector and free-walking exoskeleton is a perfect combination for neurological patients."

Alessandra Suozzi D'Antonio
United Kingdom

"Watching patients take their first steps again with the help of BTL EXO is very emotional. It brings back not just movement, but hope for a return to normal life."
