

Rehabilitation Without the Limits of Gravity

R-FORCE is an anti-gravity treadmill which **enables effortles movement tailored to each patient's abilities and goals**, supporting safe recovery from day one.

With body-weight support, real-time feedback, and immersive exercises, it is suitable for neurological, orthopedic, and sports medicine rehabilitation.

The Only Zero Gravity Treadmill

Training Right After Injury

Provides Real-Time Feedback

The Only Zero Gravity Treadmill

R-FORCE is the only rehabilitation treadmill that enables **active training with full body-weight support**, using air pressure to reduce the patient's weight by up to 100%.

Unweighting levels and key gait parameters can be adjusted during therapy, ensuring **precise personalization** to each patient's needs. This adaptability supports progressive training and facilitates a smooth transition from highly assisted movement to independent gait.

Training Right After Injury

With adjustable unweighting, R-FORCE enables patients to begin walking or running immediately after injury, minimizing joint stress and supporting safe, effective, and more intensive rehabilitation from day one.

On our body weight supported treadmill, patients have the opportunity to learn balance control and proper movements through interactive exercises. These skills can then be seamlessly transferred into their gait training, enhancing early rehabilitation outcomes.

Provides Real-Time Therapy Feedback

An integrated wide-angle camera captures the walking sequence in real time, giving patients clear visual feedback to self-correct and improve with every step.

The system further combines the camera with treadmill-embedded sensors, enabling detailed tracking of gait parameters such as walking symmetry and weight distribution. All data are stored in comprehensive reports for analysis and progress monitoring.

Rehabilitation For A Broad Range Of Patients

Orthopedic recovery

R-FORCE helps orthopedic patients safely re-learn to load the impaired limb, improve joint stability, and correct gait patterns like step length, width, and symmetry. Zero-impact movement supports a gradual return to full weight-bearing and active mobility.

Neurological Rehabilitation

Ideal for patients with balance disorders, ataxia, or muscle weakness, BTL's anti-gravity treadmill promotes safe movement through gradual unweighting, real-time feedback, and interactive exercises that enhance coordination, gait consistency, and postural control.

Listen to Your Peers

Patrick Van Ackere
France

"Thanks to the rehabilitation treadmill R-FORCE, the care of patients with serious pathologies is guaranteed with an incomparable success rate and a significant result from the first session."

Juan G. Réatiga
Columbia

"R-FORCE is perfect for athletes in the reintegration phase of their rehabilitation. It allows them to perform rehabilitation, cardiopulmonary training and jogging while minimizing the load on the limbs."

Francesco Romeo
Italy

"We have seen an osteogenic response following fractures in compliance with the load forces in orthopedic patients, while all patients with Parkinson's disease improved their walking."
