

Robotic Gait Device For Neurorehabilitation

R-GAIT is an **end-effector robotic gait trainer** that restores the patient's ability to walk. Designed **for adult and pediatric patients**, it delivers an unmatched natural walking motion.

Whether in passive or assistive mode, every step is tracked through intelligent sensors, providing real-time feedback that motivates patients and supports engaging, precise gait recovery.

Robotic Early Gait Recovery

The Most Natural Gait Pattern

Interactive Feedback-Driven Therapy

Robotic Early Gait Recovery

Even in the earliest stages of recovery, our gait rehabilitation robot helps your patients **take up to 1,500 steps in under 30 minutes**, thanks to a **lightning-fast patient setup** that takes less than 5 minutes.

This **high level of repetition** supports faster gait re-learning and improved walking patterns, while the high-dose, task-specific training builds strength and coordination in ways **conventional therapy simply cannot match**.

The Most Natural Gait Pattern

A unique combination of **flexible footplates** that actively flex the metatarsal joint, **3D pelvic motion** combining vertical, horizontal, and rotational movements, and **dynamic body-weight support** perfectly synchronized with the rhythm of walking delivers the most natural gait experience.

The system accommodates a wide range of patients, supporting individuals with overweight up to 175 kg and children from 80 cm in height, ensuring that everyone can benefit from safe and physiological gait rehabilitation.

Interactive Feedback-Driven Therapy

Motivational exercises engage patients at every step, turning each session into an interactive and rewarding experience that keeps them moving and improving.

At the same time, **precise real-time feedback from 16 sensors** embedded in the footplates empowers therapists to monitor progress and adjust training instantly.

All data is stored in the patient database and available for export and later analysis, supporting highly effective and personalized gait rehabilitation.

Support Across Neurological Conditions

Stroke

R-GAIT provides gait training for stroke patients and helps them regain walking ability through high-repetition, task-specific gait training that promotes neuroplasticity and accelerates motor recovery.

Traumatic Brain Injury

For patients with traumatic brain injury, R-GAIT provides safe, intensive gait training that rebuilds strength, coordination, and endurance.

Listen to Your Peers

Cordula Werner
Germany

"End-effector-based technology is better than other alternatives, and patients who practice such walking regain their ability to walk much faster!"

Łukasz Wieczorkowski
Poland

"A huge advantage of the device is the fast and safe handling of the disabled patient even in one person. R-GAIT is an ideal device for both gait stimulation and gait improvement."

Martin Malovec
Austria

"Notable features of R-GAIT include its easy adaptability to pediatric patients and the use of flexible footplates that encourage a very natural and physiological gait."
