

BTL WALK

The Only 2-in-1 Wearable Technology for Drop Foot

Book demo

For Both Gait Preparation & Independent Walking

BTL WALK is **the only device for drop foot** on the market that **supports patients throughout both phases of their recovery**.

It uses **real-time EMG biofeedback** to retrain and correct muscle activation for safer and more effective walking, while the integrated smart sensors deliver **precisely timed functional electrical stimulation** for long-term improvement.

Unique EMG-Driven Biofeedback

Adaptive Gait Sensing & Precise Stimulation

Limitless Walking on Any Terrain

Unique EMG-Driven Biofeedback

In the acute phase of gait rehabilitation, BTL WALK helps reduce neurological symptoms such as pain and swelling, reduces spasticity to improve mobility, and supports the strengthening of weakened muscles.

EMG-driven real-time biofeedback retrains correct muscle activation for functional walking. It also prepares patients for safe and effective walking, supports proper muscle activation, timing, and coordination, and builds the foundation for functional gait recovery.

Adaptive Gait Sensing & Precise Stimulation

In the advanced phase, BTL WALK continuously adapts to the patient's gait using integrated smart sensors, delivering precisely-timed functional electrical stimulation (FES) for natural and effective walking.

It transfers prepared gait patterns into daily walking and enables repetitive, task-specific practice in real-life environments. This supports long-term functional improvement and motor learning.

Limitless Walking on Any Terrain

BTL WALK promotes a natural, secure gait, enhancing mobility and independence on any terrain.

Our device for drop foot dynamically adapts to the patient's walking pattern, stimulating the specific muscles responsible for foot lift.

For the ones using it, everyday activities like city strolls, climbing stairs, going downhill and even leisure hiking become effortless!

The Comprehensive Solution for Drop Foot

Drop foot following stroke

BTL's device for drop foot helps stroke patients by activating the muscles responsible for lifting the foot during walking. This improves foot clearance, reduces the risk of tripping, and promotes a more natural and symmetrical gait.

Gait impairment in Traumatic Brain Injury

Our efficient FES stimulator supports correct muscle activation at the right time, enhances walking safety, and contributes to functional mobility recovery.

Listen to Your Peers

Martin Malovec
Austria

"BTL WALK helps patients relearn how to walk while improving leg function. It can be used during walking, stair climbing, and other daily activities, helping improve overall quality of life."

Dominika Kúrová
Czechia

"Clients immediately felt the benefits of the neurostimulator during walking. The main advantages included a sense of lightness and assistance while walking on flat surfaces, uneven terrain, and stairs."

Diana Tache
Romania

"Patients report greater confidence and safety while walking, leading to improved independence in daily activities."
